### **Integrated Farming System (IFS)**

**George L. Chan**

*Commonwealth Northern Mariana Islands  
Saipan, CM*

The integrated farming system (IFS) is a concept that holds promise for the people of the tropical world where there is plenty of solar energy, the nonpolluting source of power for this

technologically simple system. It is a viable alternative to the highly technical and petroleum-based systems that brought economic development to the industrialized countries. The integrated farming system approach is based on effective management of water and food systems in a complete recycling program that produces its own feed, fertilizer, and fuel for an integrated livestock-aquaculture-agriculture industry development, while controlling problems of sanitation and pollution at minimum cost and for maximum benefits.
